Safety Inspection Guidelines

General observation and escalation guidance for fictional training; not a substitute for qualified safety advice.

SAMPLE - TRAINING USE ONLY | Version 1.0 | Sample date: November 9, 2026

Purpose and limitations

- Use this guide for basic observation and reporting during workplace visits.
- It does not establish legal compliance, authorize inspections, or replace site-specific requirements.
- When conditions appear hazardous, follow the site’s approved reporting process and seek qualified assistance.

What to observe

- Visible trip hazards, obstructed ordinary walking paths, and housekeeping issues.
- Signs of water leaks or damaged fixtures that should be referred for assessment.
- Unusual conditions reported by the site representative, recorded without speculation.
- Whether a specialist review is needed for concerns beyond the coordinator’s expertise.

How to record findings

- State where the issue was observed using a general area name, not sensitive access details.
- Record what is visible and when it was observed; do not assign blame or diagnose causes.
- Classify follow-up urgency according to the organization’s approved process, not this sample guide.

Escalation and closeout

- Refer potentially urgent conditions promptly to an appropriate authorized contact.
- Document the handoff, responsible role, and next check-in date.
- Do not mark an issue resolved until closure is confirmed by the responsible party.
